

Statement of Commitment

We, the undersigned Colorado Photonics Industry Association, are committed to supporting the Center for Occupational Research and Development (CORD) and Community College of Denver (CCD) in their efforts to develop an AAS Precision Optics Program. We will work with CORD and CCD as advisors, as needed, in developing this curriculum and assist them in revising the New York Photonics Industry Association equipment list to best prepare students for employment in our member companies. We further commit that we will assist in supplementing the CCD precision optics equipment inventory so students in the AAS Precision Optics Program have access to equipment required by the developed curriculum through access to the Colorado Advanced Photonics Center, loans or donations of equipment to CCD they do not have in their inventory and/or working with CCD to establish internships that will allow student access equipment consistent with that specified by the curriculum.

David Giltner, President

Colorado Photonics Industry Association
