

Optics Technology[®]

18 August 2010

To Whom it may concern:

Optics Technology, Inc. is committed to supporting the Center for Occupational Research and Development (CORD) and Monroe Community College (MCC) in their efforts to develop an AAS Precision Optics Program. We will work with CORD and MCC as advisors in developing this curriculum and assist them in revising the New York Photonics Industry Association equipment list to best prepare students for possible future employment at our company. We further commit that we will supplement the MCC precision optics equipment inventory, when able, so students in the AAS Precision Optics program have access to all equipment required by the developed curriculum, by either loaning or donating to MCC, equipment they do not have in inventory.

Sincerely,

Gerald B. Isaac
President
